Helping Children Impacted by Parental Substance Use Disorder
About the Report

The Addiction Policy Forum prepared this publication in coordination with Warren County, Ohio.

This project was supported by Grant No. 2018-MU-MU-K073 awarded by the Bureau of Justice Assistance. The Bureau of Justice Assistance is a component of the Department of Justice's Office of Justice Programs, which also includes the Bureau of Justice Statistics, the National Institute of Justice, the Office of Juvenile Justice and Delinquency Prevention, the Office for Victims of Crime, and the SMART Office. Points of view or opinions in this document are those of the author and do not necessarily represent the official position or policies of the US Department of Justice.
Introduction

When we encounter a child who has a parent struggling with a substance use disorder, it can be hard to know what to do. What should we look for? What can we say? If there are signs of neglect or abuse, what are the steps we should take?

This toolkit is for adults who come into contact with children impacted by a parent's addiction and provides information about how to help. It is meant for anyone—teachers, coaches, pastors, relatives, friends, neighbors.

"It often takes only one caring adult. Clergy, neighbors, grandparents, relatives, teachers, coaches, counselors, primary health professionals and other trusted adults can provide needed support, thereby breaking the silence that reinforces their sense of shame, stigma, and isolation, whether or not their parents find recovery. In other words, these potential influencers in a child's life matter - and they matter greatly. They have the power and opportunity to make the critical difference, to help grow healthy kids. Adults can - and do - change the trajectory of an impacted child's life, simply by caring and being there."

Sis Wenger
President/CEO, National Association for Children of Addiction
Childhood trauma includes events and experiences that threaten the physical or emotional wellbeing of a child. In the U.S., a significant number of children are exposed to traumatic events, often related to parental addiction. Parental addiction can be associated with child neglect and abuse. Parents and caregivers with a substance use disorder (SUD) can increase demand for child welfare services. Since 2000, an extra 1.2 million children have entered the foster care system because of parental SUDs.[1] In a single year, the number of children in foster care because of parental SUD may be as high 30%, and over 60% in some states.[2]

In the U.S., over 8 million children have at least one parent with an SUD.[3] This number may undercount the real amount of impacted children because of reluctance to self identify as children of parents with a SUD.

Children who have a parent with a SUD are more likely to see and hear more fighting, witness more crime, suffer more from poverty, and lose more stable relationships with caring adults. The resulting trauma can last a lifetime, harming physical health, academic performance, employment status, and relationship formation. It also puts children at an increased risk for developing mental health and substance use disorders.

One of the most important things to remember is that parents struggling with drugs or alcohol are not "bad" parents. They love their kids, work hard to care for them, and want what's best for them. But drugs and alcohol can "hijack" the brain, making a person think that the substance is the most important thing for survival.

Fortunately, there are effective ways for adults to respond to children impacted by parental addiction and begin the process of helping them on a better path. There are also innovative programs and services available to help. Healing from trauma takes time, but the support of a caring adult can make an important difference.
Understanding Adverse Childhood Events

Adverse Childhood Experiences (ACEs) are traumatic events that occur between the ages of 0-17.[4]

There are many different kinds of ACEs, including losing a parent, neglect, sexual, physical, or emotional abuse, witnessing a parent being abused, mental illness in the family, and parental SUD. The more ACEs a child has, the more likely he or she is to experience problems later on in life. If left unaddressed, they can have lifelong negative effects, making injury, death, mental health problems, chronic diseases, and unemployment much more likely.

ACEs, like a parent's addiction, cause “toxic stress,” which can change the way the brain develops. Some stress is natural and helps children develop the right emotional responses to life. But brain changes from toxic stress undermine this healthy response process while harming learning and decision-making abilities. Over time, these brain changes may encourage bad decisions and dangerous behavior.

There are ten types of childhood trauma measured in the ACE Study that fall into three categories: abuse, neglect and household dysfunction.

Children with a Parent Struggling with Addiction: What to Look For

How would you recognize that a child may be struggling? For adults who come in contact with children and teens, signs to look for can vary.

"Children experiencing trauma from a parent’s substance use disorder can have very different signs and symptoms," explains Jessica Hulsey, Founder of the Addiction Policy Forum.

"One child may take the caregiver role for siblings and even their own parents. They may exhibit high-functioning skills yet show signs of stress and anxiety. Other children may show signs of addiction in the home through unkempt physical appearance or signs of hunger and malnutrition with no caregiver able to provide for clean clothes and care.

Other signs may include absenteeism and tardiness from school and expressions of stress and concern about their parent or caregiver’s addiction directly to teachers, coaches, and pastors,” shares Hulsey.
What You Can Do

Important Messages for the Child to Hear

- You have no control over your parent's addiction. You didn’t cause the problem, and you can’t stop it. What your parent does is not your responsibility or your fault.

- You cannot make it better but can take steps to care for yourself.

- You are not alone, and support is here.

- Addiction is a disease of the brain. It causes changes in priorities or behavior, and loss of control.

- Get involved in extracurricular activities and things you enjoy at school or near home, like the school band, sports, Boy or Girl Scouts, or others. These types of activities can help you balance your stress from the problems at home, while learning new things and seeing how other people live their lives.

Other Things You Can Do

Make sure the child has fun: Children of parents struggling with addiction tend to be stressed and anxious with adult-like problems weighing them down. Helping them “just be a kid” and have fun is important. And by engaging in healthy ways you are showing them how other people live their lives.

Help the child feel understood and validated. Praise or support the child’s actions to stay safe. Children impacted by addiction are often taught to cover for the behaviors of family members and as such expressing their emotions and feelings might be dissuaded by caregivers. And encourage them to share their feelings and emotions.

Teach the 7 Cs

Share the “7 C’s” with the child, which was developed by Jerry Moe and the National Association for Children of Addiction (NACoA).

NACoA is a nationwide organization working to stop the bad effects of alcohol and drugs on children and families. The 7 C’s is a good way to remember how to talk to children. It is a quick, effective strategy to address what children often worry about deep down when their parents have drug problems. The 7 Cs mantra is:

I didn’t cause it.
I can’t control it.
I can’t cure it, but I can help take care of myself by communicating my feelings, making healthy choices, and celebrating me.

YOU CAN HELP
THE 7 CS

- I DIDN'T CAUSE IT -

I Can't Control It
I CAN'T CURE IT

But I Can Help Take Care of Myself by Communicating My Feelings

MAKING HEALTHY CHOICES

and Celebrating Me
Law Enforcement Responses

For law enforcement officers who come into contact with a child at the scene of an arrest due to drugs or at the scene of an overdose, there are specific guidelines you can follow to safeguard children present.

According to the International Association of Chiefs of Police (IACP) and the Bureau of Justice Assistance at the U.S. Department of Justice, a model policy when a child is present should include specific steps.[12] These guidelines break down recommendations for law enforcement for both arrest and overdose situations.

Parental Arrest

During the arrest of a parent with a child present at the scene, the officer should:

1. Contact Children and Family Services if there is a threat of imminent danger to the child or signs of abuse or neglect.
2. If no immediate threat is present, try to locate the other parent or another caregiver to take custody of the child.
3. If possible, make the arrest and proceed with handcuffing and questioning away from the child’s sight and hearing.
4. Have the parent reassure and calm the child. If not able to speak with the parent, the office should provide reassurance that is age-appropriate, emphasizing that the child has done nothing wrong and will be safe.
5. The officer should not leave the scene of the arrest until the child is in the care of a caregiver.
6. If possible, the officer can ask the parent about items or objects that provide particular comfort to the child, such as toys, clothing, blankets, photographs or food that can be taken with the child.
7. Ask the parent about any medical or other conditions or treatments of the child that would become the responsibility of a caregiver.

Parental Overdose

1. Contact Children Services every time there is a child present at the site of an overdose.
2. Even if there is no immediate signs of abuse or neglect, contact Children Services every time.
3. Do not leave the scene of the overdose until the child is in the care of a Caregiver or Children Service worker. A Children Service worker should arrive within an hour of the call.

Helping Children Impacted by Parental Substance Use Disorder
How to Respond to a Child Affected by Parental Substance Use Disorder

Does the child show signs of physical, sexual or emotional abuse?

Yes

Report abuse or neglect

Contact non-emergency number or local law enforcement of child protective services

No

Be a supportive adult in their life
